

Driver's license solutions for States and Provinces

Gemalto offers the most comprehensive and secure driver's license solutions available today. Beginning with secure capture and validation, our suite of Coesys solutions enables you to streamline your workflow from beginning to end and to deliver innovative, ultra-secure cards and documents to your citizens.

We understand that each State and Province faces unique challenges in finding solutions that work within existing infrastructure and policies. Our team of software and solution experts can tailor a Coesys system to suit your needs. Coesys credentialing software was designed to be fully customizable and to integrate seamlessly with your existing applications.

Gemalto's driver's licenses and ID cards contain the most advanced security features in the market. We operate 31 central issuance facilities, all of which consistently achieve the most stringent security

certifications year after year. We draw from decades of expertise in data and identity protection gained by producing high-security credentials for some of the world's largest banks and governments.

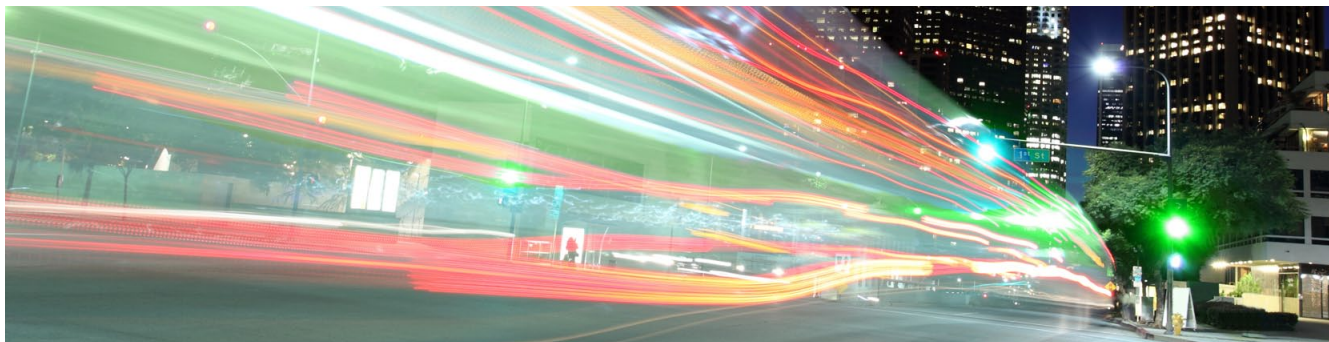

The Coesys system can be configured to support a wide range of features including:

- > "Photo First", kiosk, and self-service capture
- > Image, data, and biometric verification
- > Flexible batch and individual card request management
- > Fraud prevention, audit, and reporting

Why Gemalto? For jurisdictions looking for a solution that is fully integrated and secured, the Coesys system can provide peace of mind. Let our experts help to save your agency valuable time and fully secure your business processes.

Driver's license solutions for States and Provinces

Peace of mind for governments and citizens alike

Personalization and Issuance

Gemalto understands that every project is unique in its scope, technology and partners. Gemalto's Coesys Credentialing solution ensures seamless migration by:

- > Adapting to specific issuance schemes: centralized, over-the-counter, or hybrid
- > Offering the right technology to meet our customers' requirements whether it is direct to card, retransfer, or laser engraving
- > Leveraging our established relationships with leading suppliers of personalization equipment and PKI systems

The systems we deploy to our customers are the same systems that drive our 30+ personalization centers around the world. We personalize 1.4 billion devices per year. With this experience, we have built highly flexible solutions that can securely manage your confidential data quickly and accurately.

Sealys Secure Documents

To ensure a winning position in the relentless race between security and fraud, Gemalto has created the Sealys range of secure, durable, innovative and tamperproof documents and operating systems that ensure you will always be one step ahead. Some of the features that we provide include:

- > 100% homogeneous polycarbonate and long lasting PET/PVC
- > The most comprehensive set of advanced security features for tamperproof products
- > The largest team of security experts in the industry and over 120 years of experience in secure printing

Sealys MultiApp ID Operating System

It is important to know that Gemalto can not only meet your current requirements for AAMVA compliant driver licenses, but we are also the world's leading provider of smart card based solutions and the perfect choice for your smart driver license (SDL) pilot.

The Sealys MultiApp ID Operating System is based on the latest open platform (Global Platform/Java) specifications and provides modern smart card applications and implementations for eDriver, eID and eHealthcare solutions. The OS has the highest number of security evaluations and certifications, thus providing the strongest security. The modular and flexible platform serves various needs, enabling identification, authentication and digital signatures (IAS), ePassport functionality with biometric data and can also store healthcare information.

Gemalto Secure Documents are deployed in more than 80 national programs worldwide. Gemalto personalizes over 1.4 billion devices per year.

Online services

Would you like your citizens to be able to access online services more securely? Coesys eGov 2.0, our award-winning software, gives citizens a simple way to access online government services using strong, multi-factor authentication in connection with a smart driver's license (SDL) or ID card.
